older sibling, he is expected to do so, and take his turn. So practically every grown-up member of the family goes through almost the same farming stages and hence there is no specialization in any particular farm task. Friction sometimes occurs between brothers, because of gaps in this process of training, as in the case of a brother who has been working in town at an early age returning to the village to work with his family. He would resent, for instance, fetching the fertilizer from the hill, while his older brother might expect him to take over this task. In the same way, boys who had been sent by their fathers to the Kuttab to memorize the Koran till the age of fourteen or fifteen would find it difficult to adapt themselves to the cycles of agricultural work. In a few cases the performing of the appropriate tasks according to age and ability has led fathers to give each of their married sons a separate piece of land to cultivate for himself, as if they were leasing the land, the father getting one-third of the crop.

In spite of the fact that between the ages of five and twelve there is a certain amount of overlapping in the tasks of both boys and girls in the home, yet the sexual dichotomy in work is definitely established about the age of twelve. Even at an earlier stage, when the girl takes the food to the field or takes a basketful of grass to the sheep, she is only allowed to remain at the edge of it by the canal. If she ever entertains the idea of touching the implements or playing with the water, her father or brothers immediately shout at her 'Leave it! Get off the land or away from the water!' After the age of thirteen, the girls' errands are confined to the neighbourhood and they work more inside the dwelling. They are encouraged to go out for water-fetching only after sunset, when all men have returned home from work. The agricultural road leading from the village to the Nile is monopolized at night, specially on moonlit nights, by adolescent girls and women going to the Nile to fill their water-jars.

In discussing the productive activities in the village, the incentives for work must be mentioned. It is hardly necessary to stress the fact that the drive for food, and for sufficient supply of it, is one of the basic motives for work. With the small landholdings there is hardly any other alternative but to grow crops which yield the major substance of their food consumption, bread, whether wheat, barley or millet, constituting the bulk of food intake in any meal. It is believed that bread made out of home-grown crops is more lasting and sufficing than that made out of seeds bought at the market, as there is more 'baraka'—holiness and sufficiency—in the former kind. Even those few farmers with comparatively large-sized farms who have recently taken up the cultivation of cash crops like cotton and sugar-cane, still reserve the major part of their land for corn. Security of food supply depends on growing seeds as the only way of subsistence. 'From where are you going to eat?' is a question invariably asked by the villagers of any of them who entertains the idea of growing cotton on his small farm.

As it is, the various crops have different security and prestige values/

LIVELIHOOD IN SILWA

attached to them. Millet is the source of food for almost eight months, extending from September to April. The same applies to barley, which is the food crop during summer. Wheat bread is a delicacy enjoyed now and again, and usually connected with festival and religious occasions. It is also the crop that provides mainly the substance, with the addition of chicken or pigeons, of mutual food gifts on events of marriage, birth and circumcision, as well as the bread that is to be offered to guests. It is also wheat that is normally sold in the market, or exchanged for goods in the shop. Hence the season for weddings and circumcision ceremonies falls only after the harvest of wheat, when it is abundant in the village. More than in any other seed, the villagers are deeply interested in the price of wheat. The price of wheat is the first topic a villager returning from town will discuss with his people who will be all too eager to listen. In an often-heard argument between a cloth-merchant and a farmer, the latter, in attempting to reduce the price of the cloth, will retort to the merchant, 'Do you know how much wheat is worth?'

In connection with food, the writer recalls a tentative suggestion to one of the villagers that one could have a meal without bread, to which the horrified man immediately replied, 'There is no Strength, nor Might save with Allah! May God preserve this bliss for us.' He then enquired how one could get filled without bread. 'Certainly, bulkiness is one of the main things in a satisfactory meal, and nothing is more filling than loaves of bread.'

Bread is not only filling, but also possesses an aura of sacredness, being believed to be the essence of life. The name given to bread is 'aish' which literally means life. It is profane to put bread on the ground, and every effort must be made to pick up any crumb that falls to the ground for fear of it being trodden on.[1] Bread, like written words on paper, which might contain something from the Koran, must be respected. Before mother sweeps the house, children go looking for pieces or crumbs of bread or bits of paper with writing on them, and either give them to birds or goats in the former case or put them in the fire in the case of paper. Children are also enjoined to kiss bread if it falls from their hands on the ground, and if they find it lying in the street to remove it into a crevice in the wall. They are punished if they throw bread from their hands when angry or annoyed, as this might make the 'baraka' fly from the house.

Another deep incentive for work is the desire to emulate and attract social approval. The belief of the villager that nobody, at least in his village, is intrinsically better than any other person, gives him a feeling that all are equal. The strength of the impulse for emulation is clearly expressed in some of their often-repeated maxims: 'Without emulation the world would not have been populated and developed', 'Even com-

[1] Something similar to this has been mentioned by E. W. Lane, which he describes as 'The excessive and unreasonable respect of the Egyptians for bread', *Manners and Customs*, p. 290.

difference between friends'. Moreover, economic pressure can be brought to produce social conformity and curb the heretic. In the case of a shopkeeper whose private life was open to suspicion, he found that his customers had gradually deserted him, and he had to search for work in town. Part of the village efforts to establish a new mill were provoked not only by the raising of the charges by the owners, but also by the fact that one of them had been accused of fomenting intrigues between the villagers. This added fuel to the mill's campaign 'to ruin the house of such a man'.

No study of the fellah's nutrition and its connection with cultural values has been made. The following remarks about diet in Silwa are appropriate; they are, however, inadequate as such a question requires a special enquiry by itself.

The villager has no concept of a balanced diet apart from a filling or a delicious meal. Meals, especially dinners, are often better provided after the reaping of the new harvest when food would be plentiful, and meat could be bought, while gradually the meals become poorer and meat is rarely served. It is said that 'one good meal a year is a support like a stick' in justifying one expensive meal whenever possible. Moreover, bread is always preferred to be hot, 'just coming from the oven', which means an arduous task to the housewives, as the provision of cooked food is an important part of their matrimonial duties. One of my female relatives told me that she knows of two cases where a husband had to divorce his wife because she seldom provided him with freshly-baked bread or hot 'ghamoos'—a cooked vegetable in which he can dip the bread.

The preparation and cooking of a meal is associated largely with certain kinship and neighbourly obligations. Relatives might help each other in picking the odd stones or foreign matter from the seeds before sending them to the mill, help in sieving the flour or in baking. If a woman bakes her bread in a hot oven of a neighbour (a device for saving fuel), she has to offer one of the children a loaf of bread. Neighbours and relatives might borrow loaves of bread from a woman who has just baked. After baking, a woman may send a loaf or loaves of bread to a widowed relative or send a 'dwaga'—bread to be tasted—from the newly-harvested crop.

As a rule, the villagers take three meals a day—breakfast (fatour), lunch (ghada), and an evening meal, at sunset (asha). But farmers occasionally eat between the meals anything available, which they call 'ijalla', i.e. the food that does not precipitate the next meal.

An evening meal, especially a well-prepared one, is certainly the apex of the day's work, the reward and joy for the day's efforts and toil.[1] The gathering round the table—'tablia'—for the evening meal, reflects the family unity, its hierarchy, and its discipline. The father and the children sit on the mat or on the bed round the low table to eat from one dish. If there is meat, it is the father who distributes it, giving each child his or her share, a larger portion to the older boys and less to the younger, and the

FOLK LIFE AND SOCIAL CHANGE IN THE VILLAGE

It is not without significance that in ceremonies of circumcision and marriage, the boy and the man have to visit the mosque in a ceremonial way where dates and food are distributed. In praise of marriage, a villager would quote the Prophet's saying, 'He who marries has perfected half his religious requirements, and he has only to fear God in the other half'. It is also worth stating that the majority of the personal names of both sexes have some religious meaning or are the names of some religious personalities.

The importance of sacredness not only permeates those levels, justifying acts and deeds, but also reaches the substance of living, namely, foodstuffs and bread, usually referred to as the 'sustenance of Islam' and which are considered to be sacred. A good harvest is a sign of God's approval; a torrent of rain which destroys the villagers' crops is a sign of His disapproval. To impart holiness to the land before sowing, or to the harvest before threshing, a sacrifice of an animal and the partaking of a communal meal are desirable acts. According to the enlightened religious view, the villagers do not distinguish between pagan and the proper Islamic concepts. The village schoolmaster said that the belief in the power of saints, sorcery, and magic, and the appeal to divination and ritual for healing the sick as practised in the village, are complexly interwoven with Islamic beliefs, but they are not in fact a part of the pure Faith.[1] It is believed that sickness might be inflicted by a saint for not fulfilling a vow taken in his name, or for not offering him his due customary gift and sacrifice. A great deal of treatment of disease and of acquiring of good luck could be achieved by prayers, sacred charms, and propitiation of saints. The strength of the religious force could be also ascertained from the fact that the most binding guarantee for a promise is to swear by the name of Allah or to read the Fatiha. It is also customary for the villagers to take an oath sacrifice for God or a saint, which is a kind of conditional oath involving the slaying of an animal on the fulfilment of a certain task and the attendant danger that may ensue in the event of perjury.

The certainty and uniformity in religious beliefs and rituals specially noted in the observance of the fasting month, is an index of the religious group cohesiveness. All the villagers belong to the Maliki school of the Sunni tradition. Most of the adult villagers attend the Friday noon prayers, and say their regular daily prayers either at home or in the mosque. There is a well-known Islamic tradition believed by the villagers that group prayers are more efficacious and rewarding than those said alone.

It is no exaggeration to say that the folk culture of the village is permeated by religious sanctions and moral values derived from the Islamic traditions as revealed in the Koran and also infused with rituals and beliefs of an older tradition. It is not difficult to assert that there is hardly

municipal or provincial government officials, and representing the village in government affairs. The Omda of the village is elected on the basis of his land property, and has been the symbol of authority and responsibility on behalf of the village. Now, with the establishment of a police station, with the availability of more people who can write out complaints, with the decrease of the wealth of the village Omda, and consequently with his inability to provide hospitality in the traditional way, or to represent the village properly without extending his hands for help from the village, his authority has been flouted and people tend to send their complaints and disputes directly to the police station or to the provincial authorities. They complain that the Omda is not what he used to be in the good old days, responsible for reception and accommodation of government officials, generous to chance travellers, or to the needy poor.[1] In a conversation between the writer and the Omda, the latter answered the villagers' allegations by saying 'If the Omda or any other man in his position would stick to what these people expect from his generosity, he would run the risk of complete bankruptcy'. The decrease of the headman's authority reveals itself in the local remarks such as 'We have an Omda without land', or expressing their dissatisfaction with regard to some unsettled disputes, the villagers would say 'It is a village without an Omda'.

By the weakening of his position, the Omda has lost prestige and people compare him with his powerful and domineering predecessor 'during whose days no one could open his mouth' and 'no children could play about'. In fact, this brings us to the personal qualities of the present Omda who is actually a pleasant and genial personality. But the people think of authority as necessarily involving an assertion of power and domination. For the same reason people praised my informant Mahmoud when he was in office as head of the ghafeers. If one wields power, one must be powerful and forceful, the villagers say, otherwise one would not be respected and feared. Gibb and Bowen mentioned something similar to this attitude towards authority in the Arab provinces in the Ottoman Empire during the eighteenth century. Al-Jabarti wrote: 'If the peasants were administered by a compassionate multazim, they despised him and his agents, delayed payment of his taxes, called him by feminine names. . . .' The prevalence of such a conception of authority confers privilege and prerogatives and is enforced upon the minds of the people by long centuries of misrule and oppression, supplemented by the religious habits of stoicism, passing into fatalism.[2]

The weakening of the role of leadership in the village is one of the main complaints that one quite often hears, either with regard to the prestige of the Omda, or with respect to the influence of the Arab councils or the relationship between the older and younger people. With disputes referred

[1] The tradition of hospitality in the village leads to the fact that bread and milk cannot be sold on a commercial basis without bringing shame to the seller. This tradition still persists while that connected with selling of milk is less rigidly observed.

or like a silver thread in the distance. He resorts to it more often than to his fellowmen. He does not pray to it, as his ancestors did, but he constantly visits it. The Nile is in his blood. There is the same intimate bond between the Nile and the fellaheen as between the sea and the fishermen of Brittany. They even call it *el Bahr*, the sea, and their fields they call "shores" (*el rif* — plural *el ariaf* — the usual word for the Egyptian countryside) (•'a). At High Nile they believe women to be more fertile and men more healthy; marriages are most often celebrated at this season. If a child is sickly or ill, his mother takes him on the Nile at this time, and makes him throw sweets and dates into the clayey waters, with the words "Oh Nile, let my strength grow like your depth". A dying fellah, before he breathes his last, is given a final draught of its living water.

In the Coptic Mass there is the following prayer: "Vouchsafe, O Lord, to bless this year the water of the river. By Thy grace bring it to due height. Gladden the face of the land, that the fields may have water and the crops be multiplied."

The silt of the Nile has its part also in the rites of life and death. The fellâha, when her time is coming, crawls to the brink of the water and takes up a handful of moist earth, which she will swallow at the time of delivery to ensure a successful birth.

When the *mizayen* cuts the child's hair for the first time, the hair ceremoniously cut off is not flung to the winds, but carefully rolled into a ball of earth.

Professional mourners bedaub their breasts, heads, and arms with mud as a sign of grief. The body is put into the earth without either coffin or clothes.

The fellaheen bury in the earth the jar containing their savings, and charms which they wish to take effect. Every birth affects the soil; the after-brith is buried inside the house, and the umbilical cord, wrapped up in a little bag with a few grains of corn, is dug into the father's field.

The fruits of the earth are still more closely involved in this peasant mysticism. The analogies between vegetable life and the peasants' own extremely physical existence make them believe in an interplay of fertility between the two.

The ceremonies of the seventh day, when the newly-born child is washed and given a name, often include the following
